

From Eco-contribution to...

Eco-Design

Éco-contributions a Lever for Eco-design

On course for the circular economy!

- Intelligent eco-declaration means substantial savings on your eco-contributions.
- Benefit from bonuses to finance your actions.

ECO-DESIGN PACKAGING IS A PACKAGING THAT CONTRIBUTES LESS

E³ Conseil can help you turn your eco-contributions into a platform for the circular economy. The investment in research and development required to design new packaging is the main obstacle to eco-design. Our team of experts will do their very best to offer you cost-effective, ecofriendly packaging solutions adapted to your products, which will significantly reduce your eco-contributions.

Based on an analysis of your eco-declarations:

- We draw up an inventory of French and European regulatory requirements for packaging (Single Use Plastic Directive, recyclability, integration of recycled materials, reuse, etc.) and their implementation dates.
- We draw up a database of your packaging with its specific characteristics.
- We carry out a comparative study of:
 - isofunctional materials (weight, recyclability, **compatibility with existing sorting systems**, etc.).
 - the different packaging solutions available (closure system, type of cap, rationalization of volume according to the product to be packaged...).
- We present you with concrete eco-design proposals that take into account both **regulatory obligations and the advantages offered by the modulation of eco-contribution tariffs (bonus) or more advantageous tariffs per material**.
- We can help you draw up your five-year eco-design action plan.

Your eco-contribution advisor

Specialist in Extended Producer Responsibility (EPR) channels and European eco-organizations.

Packaging, Papers, WEEE, Chemical waste, Waste from furniture

CITEO emballages et papiers, Adelphe, Léko, CITEO Pro, CITEO Soins & Hygiène, Ecosystem, Batribox, Ecologic, Valdelia, Ecomaison, Eco DDS, Fost Plus, Valorlux, Conaï, Eco-Embes, Afvalfonds, etc.
